 Institut. : Institute of Road Building
 Title : The Putting in Production and the Utilization
 of Tar Stabilized with Extraction Asphalt
 Orig Pub. : Drogownictwo, 1958, 13, No 4, Biul. Inst.
 budown. drog, 4, No 2, 5-8
 Abstract : It is reported that petroleum asphalt substances
 (AS) obtained by extraction (with cresol and furfurole) form
 homogeneous mixtures with tar (T). Over a period of 9 months
 there was observed no single instance of separation of such
 mixtures, or an exudation of oily drops, etc. Technology of
 production of T stabilized with AS is very simple, and the
 ready solubility of AS in tar oil as well as their ready
 incorporation in T, are noted. The T under study has good
 characteristics and differs but little, in the content of
 benzene insoluble residue and in other properties, from the
 conventional road-building T. -- Ya. Satunovskiy.

1585. REMOVAL OF A STRONGLY WEDGED NEEDLE FROM THE LARYNX
WITH AN ATYPICAL METHOD THROUGH SOFT TISSUES OF THE NECK -
Usunięcie mocno wklonowanej igły w krtani atypowym sposobem poprzez mię-
kie tkanki szyi - Bartoszewicz K. Klin. Otolaryngol. A.M., Lublin -
OTOLARYNG.POL. 1957, 11/3 (317-320)

The author describes a case of a strongly and deeply wedged needle in the larynx. With one end it was stuck in the right arytenoid cartilage, and with the other end in the right false cord. After various vain attempts to remove the needle by endoscopy, the foreign body was removed wholly without taking recourse to laryngofissure through the soft tissues of the neck in the middle line over the upper excision of the thyroid cartilage. The procedure was performed in an indirect way with the laryngeal forceps. On the day following arrival at the clinic the patient (a woman) was sent home in good condition.

~~V-(2-Hydroxyethyl)arylsulfonanilides. II. R. Bartoszewicz~~
 (Univ. Lodz, Poland). *Lodz. Towarz. Nauk., Wyd.*
 1958 *Acta Chim.* 3, 49-61 (1958) (in English); cf. C.A.
 49, 2316. — *N*-(2-Hydroxyethyl)arylsulfonanilides have been
 prepd. in good yields by the reaction of $\text{CH}_3\text{ClCH}_2\text{OH}$ (I)
 with arylsulfonanilides in aq. NaOH. The arylsulfon-
 anilides were synthesized from arylsulfonyl chlorides and
 appropriate amines in aq. AcONa , $\text{C}_6\text{H}_5\text{N}$ or in excess amines.
 3-Nitrobenzenesulfonanilide (180 g.) dissolved in a soln. of
 30 g. NaOH in 750 cc. H_2O was heated under reflux to 90° ,
 60 g. I was added with stirring during 3 hrs., the heating
 continued 2 hrs. at $85-90^\circ$, and 10 g. NaOH then added.
 The oily product solidified on cooling and was filtered off to
 give 185 g. *N*-(β -hydroxyethyl)-3-nitrobenzenesulfonanilide.
 Repeated expts. showed best results with equiv. amts. of
 NaOH and I. Similarly prepd. were: *N*-(β -hydroxyethyl)-
 4-methyl-3'-nitrobenzenesulfonanilide, m. $82-3^\circ$ (crystd.
 with solvent EtOH which slowly volatilized, raising the m.p.
 gradually), acetate m. $88-9^\circ$; *N*-(β -hydroxyethyl)-4-
 methylbenzenesulfonanilide (II), m. $76-8^\circ$, benzoate m. $86-7^\circ$;
N-(β -hydroxyethyl)benzenesulfonanilide (III), m. $38-40^\circ$,
 benzoate m. $93-4.5^\circ$; *N*-(β -hydroxyethyl)-2'-nitro-
 benzenesulfonanilide (V), m. $111.5-13^\circ$; *N*-(β -hydroxyethyl)-
 3'-nitrobenzenesulfonanilide (V), m. $67-9^\circ$; *N*-(β -hydroxy-
 ethyl)-4'-nitrobenzenesulfonanilide (VI), m. $142-3^\circ$; *N*-(β -
 hydroxyethyl)-2',3'-dinitrobenzenesulfonanilide (VII), m.
 $138-40^\circ$; *N*-(β -hydroxyethyl)-3,3'-dinitrobenzenesulfonanil-
 ide, m. $111-13^\circ$, and *N*-(β -hydroxyethyl)-3,4'-dinitroben-
 zenesulfonanilide, m. $140-1^\circ$. The preps. of II, IV, V, VI,
 and VII were carried out in sealed tubes. III was also syn-
 thesized from PhSO_2Cl and $\text{HOCH}_2\text{CH}_2\text{NHPh}$.

AUTHORS: Bartoszewicz, R.; Chrzęszczewska, A.; Drabikowska, A.;
Drabikowski, W.

TITLE: N-Beta, Gamma-Dihydroxypropylarylsulphonarylides. IV

PERIODICAL: Societas Scientiarum Lodziensis Acta Chimica, 1959, Vol 4,
pp 95 - 99

TEXT: In continuation of studies on N-beta, gamma-dihydroxypropyl-arylides of aromatic sulphonic acids (Refs. 1, 2, 3) two new compounds of this type were obtained. They are: N-beta, gamma-dihydroxypropyl-3-nitroanilide melting at 147-148°C, and N-beta, gamma-dihydroxypropyl-4-nitroanilide of 3-nitrobenzenesulphonic acid, melting at 127-125.5°C. The authors describe their experiments leading eventually to the compounds mentioned above. They have found that the presence of Nitro group, bound to the sulphonic acid and amine core, makes the introduction of the dihydroxypropyl group rather difficult. Further, it was established that, when obtaining a compound in which the nitrate group in the amine ring is in position 4, and with the application of chlorhydrine in quantities exceeding 50%, the product became greatly contaminated, most likely because of some

"Tanderil in the Treatment of Parametritis."

Warsaw, Polski Tygodnik Lekarski, Vol 18, No 28, 8 Jul 63, pp 1031-1033

Abstract: [Authors' English summary] Taderil (Geigy) had been given to 26 patients suffering from parametritis. The treatment usually lasted ten days, with a two-day interruption between the 5-th and 6-th days of treatment. Total dose varied 3--4.5 g. Good results with Tanderil were noted in 21 cases. There are six (6) references: 4 Polish, 2 German.

3568. INVESTIGATIONS OF LEUKERGIA IN SCHIZOPHRENIC CASES TREATED WITH CHLORPROMAZINE - Badania nad leukergią u chorych na schizofrenia leczonych chlorpromazyną - Bartoszewski J. Klin. Psychiat. A. M., Białystok - NEUROL. NEUROCHIR. PSYCHIAT.-POL. 1957, 7/6 (832-835) Tables 1

Leukergia was investigated in 17 schizophrenics before the treatment began and each 10-14 days during treatment with chlorpromazine. In the majority of cases the Biernacki reaction and leucocytosis were simultaneously investigated. In 13 cases leukergia was not increased. Only singular increases of leukergia in 3 cases were noted, which is explained by the motor excitation and feverish state of these patients. In 4 of the 17 cases examined there was an increase of leukergia, during the entire treatment. An increase of the titre of the Biernacki reaction was also observed as well as a higher leucocytosis in the course of the chlorpromazine treatment. The increased Biernacki reaction is explained by changes of the proportion between albumins and globulins in the blood plasma during chlorpromazine treatment. (VIII, 19)

6286. AN ATTEMPT TO TREAT CHOREA MINOR WITH RESERPINE (SERPASIL) - Proba leczenia plawawicy mniejszej reserpiny (Serpasilem) - Bartoszewski J., Klin. Psychiat. A. M., Białystok - NEUROL. NEUROCHIR. PSYCHIAT. - POL. 1957, 7/8 (853-858) Tables 1

The aim of this work was to verify the suitability of reserpine in treating chorea minor. Six children treated by serpasil in daily doses of 0.75-2.25 mg. improved on the 3rd-5th day and were completely cured on the 10th-15th day. 13 mg. to 58 mg. of serpasil was used for the whole treatment, according to age and general condition of the child. No side effects were observed except one case of bradycardia (50/min.). It is concluded that serpasil is suitable for the treatment of chorea minor, especially in graver cases.

Title : The Study of Leukergy in Schizophrenic Patients Treated with Chlorpromazine
Orig. Pub. : Neurol., neurochirurg. i psychiatr. polska, 1957, 7, No 6, 831-835
Abstract : Of 17 schizophrenic patients treated with chlorpromazine, the increase of the leukergic test was noted only in four. The cause of these changes remained unexplained at times. The rise of the erythrocyte sedimentation rate, observed during chlorpromazine therapy, apparently depends on changes of the A/G of the blood plasma.

1864. NEUROPLEGIA AND CONTROLLED HYPOTHERMIA IN NEUROLOGICAL PRACTICE (Czech text) - Bartoušek V. and Jechová D. Neurol. Clin., Med. Sch. Hradec Králové - SBORN. VĚD. PRACÍ VLA JEV 1956, 2 (1-50)

Discussion and summarization of experience with neuroplegics and controlled hypothermia in five groups of nervous diseases and syndromes, viz. in acute infectious diseases of the CNS, in acute affections of the CNS pertaining to blood vessels and demyelination, in chronic affections of the CNS, in painful syndromes of various aetiology, and in neurological affections of various origin. Possible complications in the application of neuroplegics and controlled hypothermia are the following: postural hypotension due to the barostatic reflex block (controllable by noradrenalin), constitutional hypotension in labile individuals (controllable by noradrenalin and oxygen), cardiac fibrillation at a temperature of under 30°C. Agranulocytosis and toxic hepatosis are rather rare but very serious complications. They can be avoided by using small doses of chlorpromazine. The temperature of 35.5°C. has been found to be the optimal one for neurological purposes. Neuroplegy is an advantage in the contrast methods, especially in arteriography, as it blocks both pain and reflex spasms. In a series of 177 patients only one was diseased after the application of neuroplegics. Postural hypotension was observed in 1 case, constitutional hypotension in 2 cases. Icterus or agranulocytosis was not seen.
